

# LUX

Supplied in a one-sided version, the system allows the mounting Lux. production of neon signs in continuous forms by the application of a PVC sheet. The use of the sheet reduces the reprinting costs and makes possible the realization plants also very large. Composed of aluminum profiles, is lightweight and easy to handle thanks to the absence of frames closing. Particularly suitable in the case of certain types of installations, such as the Greek bright, long even some tens of meters. The side aluminum profiles with which it is made is very versatile and has many advantages, such example, allows the elimination of all those little imperfections of traditional signs of sheet iron. Now you do not need screws, or welds, or rivets. With Lux able to break fi up to 5 times the processing time compared to a traditional method, eliminating the use of brakes, shears industrial, welding and riveting.
